PEDAL MODIFICATIONS

ELECTRONIC LEFT FOOT ACCELERATOR

The Universal Electronic Left Foot Accelerator harnesses the latest technology to replicate the signal from the electronic accelerator pedal found in most late model vehicles. Its dedicated control unit communicates with the engine management system. It's compact design allows for flexible mounting options, either on the floor or firewall.

With a simple switch installed on the dashboard, the Electronic Left Foot Accelerator can be turned on and off when required, disabling the signal from the original accelerator pedal.

- Suitable for Most Vehicles
- ADR Compliant
- Lifetime Warranty
- Ideal for multiple drivers - change from right to left pedal with a flick of a switch
