

# HAND CONTROLS RADIAL

The Ergonomic Radial Accelerator is a quality hand control designed for operation with limited dexterity. The choice of ergonomic palm or lever grip handle coupled with the ability to customise the handle weight and rotation totally personalises the product to the user's individual strengths, preferences and capabilities

# HAND CONTROLS RADIAL

## Lever Grip

The lever grip handle has a curved finish that beautifully allows your hand to rest on the handle as you turn your wrist to accelerate.

## Palm Grip

The palm grip has a v-shape handle to rest your palm whilst driving. The rotation is smooth and perfectly balanced to your hand.

## Brake Lock

A great feature is the brake locking mechanism when used sitting at traffic lights, for example, allowing the driver to rest their hand and reduce fatigue. It can be customised with electronic activation if needed.
